

# AI, Business Leaders, and IT

The Last Step in the Democratization of Business Technology

Kevin Prouty, Group VP & GM, IDC Tech Buyer BU

February 5, 2024

# Executive Summary

1

Most organizations are still learning about generative AI and are trying to determine the most applicable use cases.

2

Skills recruitment is a key consideration for IT and LOB.

3

The C suite and board are actively involved in the decision-making process of when and where to use AI.

4

Shadow AI development will be driven by IT's focus on IT use cases for AI and VERY local business development.

# The long winding road to the Age of Automation.

## Artificial Intelligence

The wild west with CXOs and IT mitigating risk without impeding innovation. Shadow IT transforms into Business technology

2020s

2010s

## Cloud Computing

Storage and compute open to anyone with an account. IT struggles to control security and spend. Shadow IT for the masses.

1990s

## Client/Server

Full distribution of computing power across IT controlled networks. Shadow IT accelerates around Y2K..

1980s

## Personal Computer

Distribution of some local computing power with continuing heavy central IT control. Start of Shadow IT.

## Mainframe

Centralized IT function with heavily restricted business flexibility

1970s

# IDC Survey Spotlight

## What is GenAI Spending by Industry Expected to Be in 2024?

Karen Massey

### Worldwide Core IT Spending for Generative AI by Industry 2024

IDC #US51697124 (January 2024)

Source: Worldwide Core IT Spending for GenAI Forecast, 2023-2027: GenAI Is Triggering Hyper-Expansion of AI Spending, n = 150

CEOs and Boards are taking a much more direct role in generative AI initiatives and investments, meaning these investments are more strategic than other technology investments

### At your organization, who will hold the primary responsibility for making decisions regarding Generative AI initiatives and investments?

The C-Suite is mostly seeking guidance for IT about using generative AI to improve customer experience and decision-making, both of which will require organizational data infused with Gen AI models.

**Overall - For which of the following Generative AI-related business benefits has the C-Suite most sought information or advice from IT leadership?**

As work practices shift, organizations say skills training and investments in automation are most likely to endure.

**In the face of current market disruptions (economic, skills, climate change, etc.), which of these work practices and technology investments are most likely to endure?**

Source: Future Enterprise Resiliency & Spending Survey - Wave 5, IDC, June 2023  
 Total N= 1,014, NA=374, EMEA=220, AP= 420

# Use Cases with the highest risk of casting a shadow

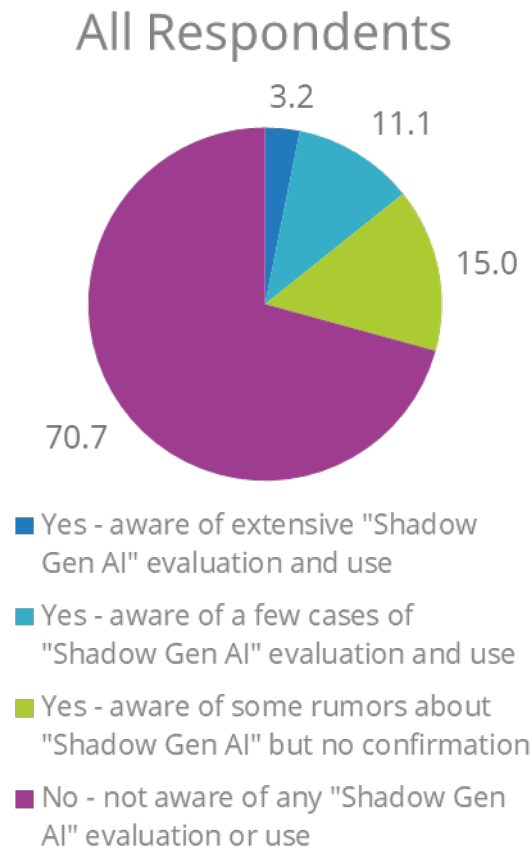

Use case categories range from productivity to product. Each category has its own risk profile for IT.

Use Cases Categories	Business Impact	Drivers	Possible Implementation Approach	Shadow AI/IT risk	Use Case Example
<b>Efficiency-based</b> 	<ul style="list-style-type: none"> <li>Increases task productivity</li> <li>Drives operational efficiencies</li> <li>Improve asset utilization</li> </ul>	<ul style="list-style-type: none"> <li>Knowledge drain risk</li> <li>Limited budget</li> <li>Low risk appetite</li> </ul>	<ul style="list-style-type: none"> <li>Operational applications with SW vendors embedding GenAI</li> <li>Native GenAI standalone applications (e.g., Microsoft Copilot, Jasper AI, and so forth)</li> </ul>	<p><b>Very High</b> – AI work is very SME-dependent with a culture of DIY</p>	<ul style="list-style-type: none"> <li>Automated report building</li> <li>Generating technical service manuals</li> <li>Augmented operator support</li> <li>Asset and business process automation limiting operator involvement</li> </ul>
<b>Customer-focused</b> 	<ul style="list-style-type: none"> <li>Increase customer engagement</li> <li>Data collection and utilization</li> </ul>	<ul style="list-style-type: none"> <li>Existing call center infrastructure</li> <li>Available talent in-house</li> <li>Budget available</li> <li>Digital infrastructure</li> </ul>	<ul style="list-style-type: none"> <li>Fine-tuning open-source models</li> <li>Fine-tuning system from existing vendors and AI platforms</li> </ul>	<p><b>Low</b> – Call centers and service are technically and culturally linked to IT</p>	<ul style="list-style-type: none"> <li>Hyper-personalized customer engagement</li> <li>Hyper-personalized wealth and investments knowledge management</li> <li>Fully automated call centers</li> <li>Generated product and service documentation from customer reporting</li> </ul>
<b>Product-focused</b> 	<ul style="list-style-type: none"> <li>Enable new digital business models, products, and services</li> <li>Industry-specific competitive moats</li> </ul>	<ul style="list-style-type: none"> <li>Stringent regulatory and privacy requirements.</li> <li>Talent in-house or partner</li> <li>Quality and quantity institutional data</li> </ul>	<ul style="list-style-type: none"> <li>Fine-tuning third-party or industry models</li> <li>Custom-built models (BYOM)</li> </ul>	<p><b>High</b> – Traditionally manages a lot of its own tech, but has tight data links to IT.</p>	<ul style="list-style-type: none"> <li>Generative drug discovery in life science</li> <li>Generative material design for manufacturing</li> <li>Generative product design and prototyping</li> </ul>

More than two-thirds of organizations say there is no Shadow AI happening today – They are whistling past the graveyard. The shadow development is just at a very local level.

**Are you aware of any evaluation or use of Generative AI by groups or individuals within the organization outside of formal approaches or policies?**

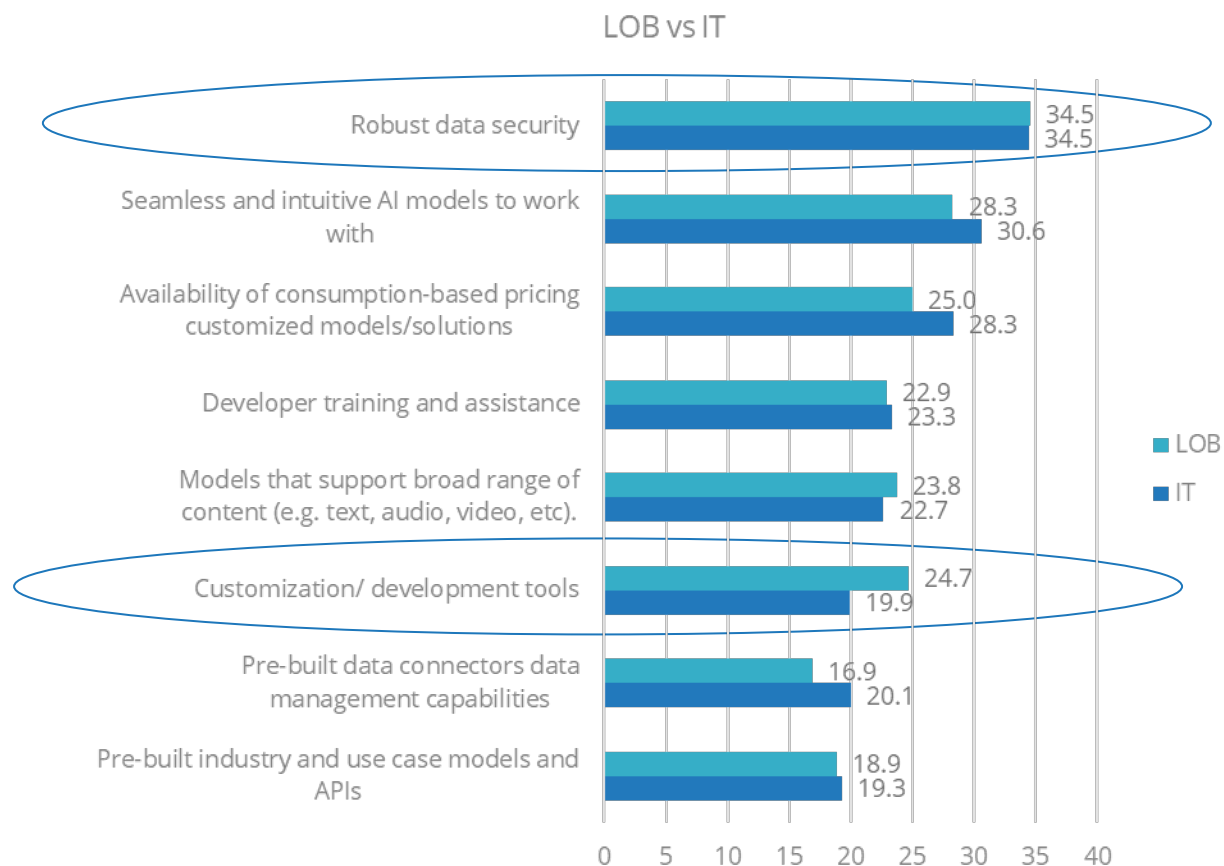

All parts of the business are concerned with data and intellectual property challenges, LOB obviously not concerned about use cases focused on the business.

## What factors are significantly limiting the evaluation and testing of GenAI in your organization?

In addition to data security, organizations have an expectation that prebuilt- data connectors and data management capabilities are also part of the solution, regardless of level or role.

**Based on your current or near-term plans to use software platform and tool providers to develop Generative AI capabilities, what is the most important characteristic your organization will look for in a software provider in the next 18 months? What is the second most important? (Aggregated)**

## From the Horse's Mouth...

We are finding that IT is moving too slow and is too focused on building an AI-related infrastructure for IT. I need tools for engineers to build out their own capabilities and make AI deployment like building a spreadsheet.

*~ VP of Manufacturing  
\$3B US Chemical Manufacturer*

The biggest potential for AI continues to be productivity and asset performance. IT is hung up on developer productivity and is leaving ops to its own devices.

*~ SVP of Operations  
\$22B Global CPG Manufacturer*

# Executive Summary

1

Most organizations are still learning about generative AI and are trying to determine the most applicable use cases.

2

Skills recruitment is a key consideration for IT and LOB.

3

The C suite and board are actively involved in the decision-making process of when and where to use AI.

4

Shadow AI development will be driven by IT's focus on IT use cases for AI and VERY local business development.
