# Automate Studio
Solutions for SAP® Data Management

Precisely Automate Studio is an Excel-compatible product that automates data collection, validation and movement for use with SAP, saving you significant time and money and increasing process efficiency.

Automate Studio enables business users to interact with SAP from familiar interfaces like Microsoft Office. By automating business processes, Studio allows you to become more efficient in SAP data management tasks, while improving SAP data integrity and accuracy.

Easy to use Excel compatible interface

Studio is one integrated tool for quickly deploying data integra-tion templates for Excel, Access or web services to interact with SAP ERP. You can streamline SAP batch data management pro-cesses like mass record creation or change, and create complex scenarios with long text and document attachments.

You can create Transaction scripts using SAP BAPIs and queries from SAP tables, infosets and logical databases, without pro-gramming. Automate Studio also supports round-trip data maintenance by enabling you to perform instant queries to extract SAP data before manipulating it in Excel and updating in SAP.

Additional data validation and verification features

Key Benefits

- Eliminate manual data entry
- Upload/download SAP data in record time
- Improve data quality
- Minimize reliance on IT for Excel integration with SAP
- Get up and running with SAP - Excel integration faster
- Ensure compliance and security standards

Customer Stories

Scientific Drilling
Migrated over 15 million master data records to meet S/4HANA go-live deadlines.

Alstom Power
Able to reduce the manual entry process from 6 days to half a day.

Under Armour
Improved the performance of SAP Master Data loading and reduced manual data.

Automate Studio Architecture

Automate Studio Modules

Transaction
Automate data import into SAP

- Create transactions in 3 simple steps
- Have fully functioning scripts operational in minutes
- Validate data before posting to SAP
- Build complex chains for multi-step data maintenance tasks

Query
Simplify SAP extracts and reporting

- Ad-hoc reports from real-time SAP data
- Select one or more SAP tables, infosets or logical databases
- Define selection criteria
- Map data for Excel, Access, or text files
- Schedule queries

Direct
Use SAP BAPIs with no ABAP programming

- Leverage SAP APIs or remote enabled Function Modules
- Use BAPIs for data creation, extraction and updates in SAP

Runner
Run SAP processes easily and securely from Excel

- SAP data creation and change without interacting with SAP GUI
- Execute previously created query files from within Excel
- Minimize the impact of queries on the performance of the SAP system

Automate Studio Manager Add-On

A powerful administration and governance platform that allows you to manage Automate Studio user licenses, share content, execute jobs from the server and more.

The complete SAP application data management solution for Microsoft Office users

- SAP and Microsoft Certified (ECC and S/4HANA)
- SAP ERP data upload, change and download
- Installs on Microsoft Windows with Microsoft Office
- Native SAP Function Module
