

Virtual Deployments of Darktrace Cyber AI Now Available

Market-Leading Cyber AI & Autonomous Response Can Now Be Trialed from the Comfort of Your Home

Cambridge, UK
Wednesday April 1, 2020

Darktrace, the world's leading cyber AI company, has today announced that its world-leading cyber security products are now available virtually.

With many organizations now adopting new remote working practices, Darktrace has made its award-winning suite of cyber AI solutions available for virtual deployment. Organizations around the world can now quickly benefit from Darktrace's proven technology without any hardware, and without employees having to leave their homes, helping them protect critical enterprise systems from cyber-threats.

In addition, Darktrace is also offering to virtually deploy its world-class AI software to new customers free of charge for a trial period, enabling enterprises to experience the value of the cyber defense technology within their own digital environments, including cloud and SaaS services, email systems and traditional corporate networks.

Remote workers are now being offered the ability to trial Darktrace Cyber AI in a 'virtual proof of value' of the following core solution areas:

- Darktrace's flagship Enterprise Immune System, which learns the 'pattern of life' of your devices and organization, and detects novel, emerging threats.
- Darktrace Antigena, a world-first Autonomous Response technology, which autonomously interrupts cyber-attacks in real time. Available virtually for both Antigena Email and Antigena Network modules.

"The shift to remote working has intensified the ongoing challenge of cyber security, in an age where cyber-threats are increasingly sophisticated and unpredictable," commented Poppy Gustafsson, CEO, Darktrace. "We are making it easier and faster than ever for remote-working security teams to access our world-leading cyber AI, delivering meaningful results in a matter of days – not weeks."

To activate a virtual, 30-day trial, visit darktrace.com/virtual

About Darktrace

Darktrace is the world's leading cyber AI company and the creator of Autonomous Response technology.

Its self-learning AI is modeled on the human immune system and used by over 3,000 organizations to protect against threats to the cloud, email, IoT, networks and industrial systems. This includes insider threat, industrial espionage, IoT compromises, zero-day malware, data loss, supply chain risk and long-term infrastructure vulnerabilities.

The company has over 1,000 employees, 44 offices and headquarters in San Francisco and Cambridge, UK. Every 3 seconds, Darktrace AI fights back against a cyber-threat, preventing it from causing damage.
